

AT WORK IN THE CHEMICAL LABORATORY

## Equipment.

There is probably not in the South a better College plant than that of Anderson College. A large main building is flanked on both sides by well arranged, well furnished dormitories. In the dormitories there is one bath for every two rooms.

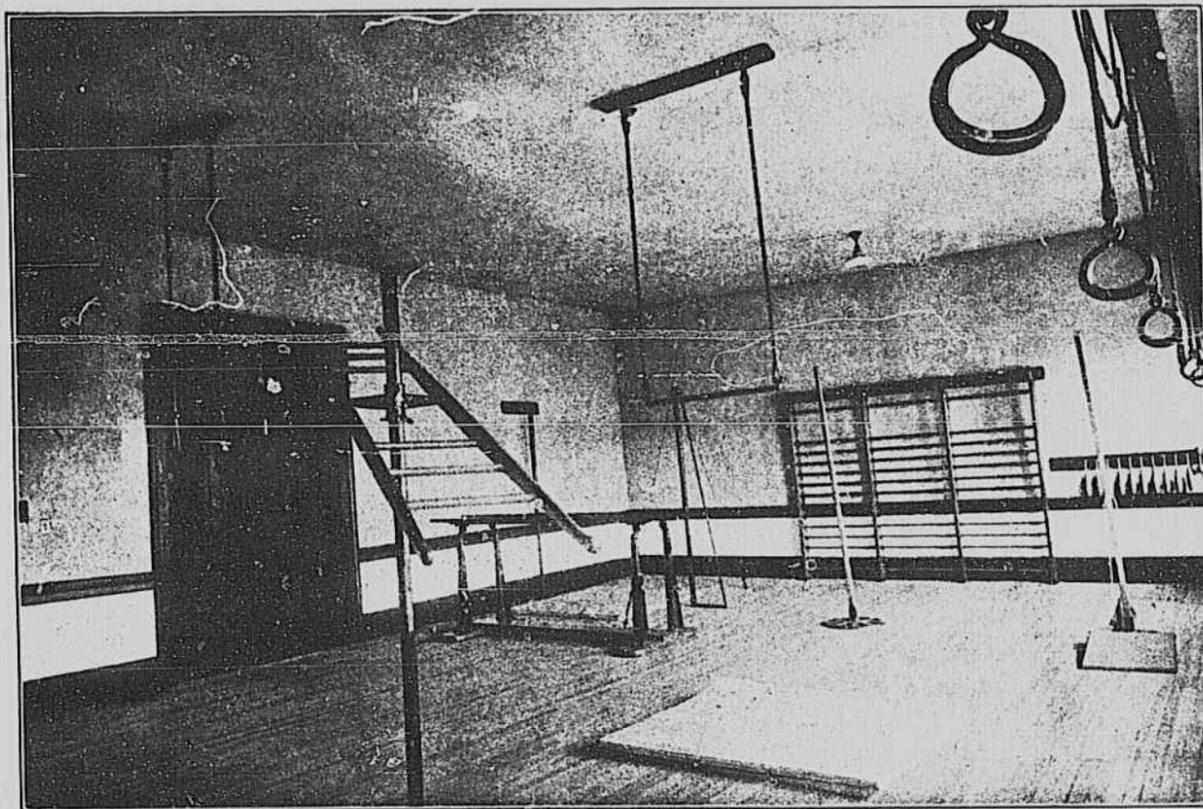

The laboratories for the teaching of Physics and Chemistry are good.

The Library is small, but it is provided with well selected books and magazines.

The department of Domestic Science and Domestic Art is fully equipped with all modern appliances for the proper teaching of these subjects.

The gymnasium is admirably equipped.

There is a large campus—thirty two acres, some of it well shaded. On the grounds are tennis courts and basket ball courts. The policy of the College is to make a specialty of the proper training of the bodies of the students. Health will be the first consideration at Anderson College.

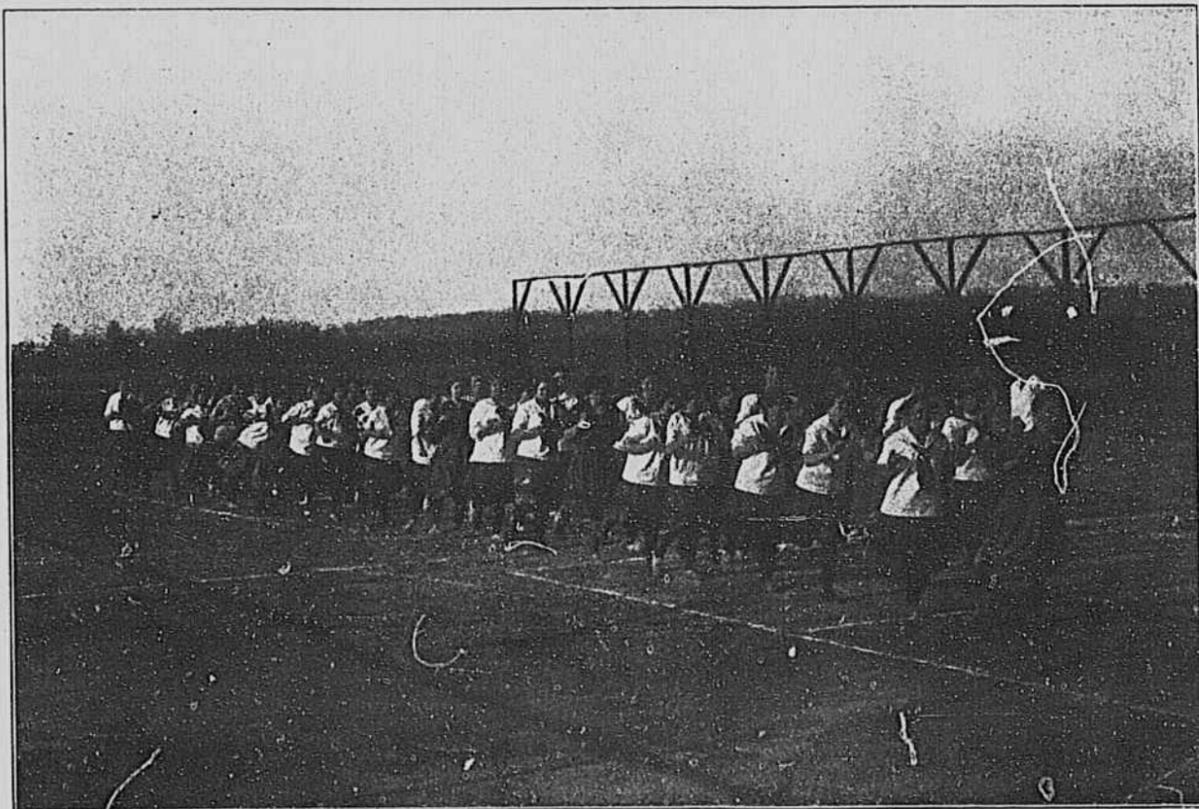

A SECTION OF THE GYMNASIUM

## Entrance Requirements.

The College requires twelve units for entrance to the Freshman class, allowing condition on two units, these to be made up during the first two years. It requires fourteen (14) units, along with other things, to make a standard college, and Anderson College will move up to fourteen (14) units just as soon as the course of study in the common and graded schools will justify it. By completing the A. M. course a student will have done a little more than the work required in a standard college for the A. B. degree.

A sub-collegiate department is at present maintained for the benefit of those who are not prepared to enter the Freshman class.
